DISTRICT DEVELOPMENT AND DIVERSITY INDEX REPORT FOR INDIA AND MAJOR STATES

Abusaleh Shariff

US-India Policy Institute, Washington D.C., USA

Knowledge partner:

USIPI is a not for profit, 501 (c) 3 tax exempt institute.

Abusaleh Shariff is a human development economist. Through research, publications and policy advice it was possible for him to bring the issue of Indian Muslim deprivation on the mainstream policy and academic debates. He is the Executive Director of the US-India Policy Institute, Washington D.C. He was a Senior Fellow and Chief Economist at the National Council of Applied Economic Research, New Delhi associated with it since 1994. He was member-secretary of the Prime Minister’s Committee to assess the social, economic and educational status of the Muslim Community of India’ and lead author of the now well known ‘Sachar Committee’ report submitted to the prime minister of India Dr. Manmohan Singh on 17th November 2006. He was also a member of the ministry of Home Affairs, Government of India’s ‘Committee for the Consultations on the Situation in Andhra Pradesh’. He worked as a senior research fellow, at the International Food Policy Research Institute, Washington DC during 2008-10.

Dr. Shariff was a recipient of the Rockefeller Foundation International Family Fellowship to undertake research at Economic Growth Centre of Yale University, USA during 1991-2. He has a PhD (1986) from Australian National University, Canberra, Australia and M.A degree from Bangalore University, India. He has over 30 years of consistent record of academic research in the field of human development, inclusive growth, poverty and inequity, development economics, labor and social security, social sector budgetary analysis, micro-impact of economic reforms, food policy and nutrition. He has executed large scale representative sample surveys on behalf of Indian Planning Commission and the United Nations System in India. He has authored/edited over a dozen books published mostly from the Oxford University Press. he is the author of ‘India: Human Development Report, 1999, first such report for India, New Delhi: Oxford University Press, pp.i-xiii and 1-370. Has published over 50 articles in refereed journals of international repute. Dr. Shariff is a member of several academic and policy committees.

US-India Policy Institute (USIPI) is a Washington, DC based non-profit organization undertaking policy research on diversity and inclusive development in India and the US. USIPI celebrates the special relationship that India and the US share as the World’s largest and oldest democracies and the common commitment to equality, freedom, rights and equal access to resources and developmental opportunities. USIPI envisions that citizens of India and the United States and the world at large are economically, educationally, politically and culturally engaged and have equal access to freedom, justice and opportunity without any prejudice.

USIPI is committed to materializing this vision by generating facts for effective public policy, articulating policy vision for economic development, diversity, equal opportunity and inclusiveness, provide forum for debate and discourse on strengthening democracy, secular institutions and minority rights in India and the US and strive to stimulate a deep US and India relationship committed to sustainable development.

PATHWAYS TO LINK COMMUNITIES WITH GOVERNANCE AT THE GRASSROOTS IN INDIA:

COMPUTATIONS OF THE DISTRICT DEVELOPMENT AND DIVERSITY INDEX

National Planning takes effect and yield fruits at the grass-roots. It is essential therefore to make assessment of the efficiency of the government programs at the lower level of administration. Factual and evidence based research will enable effective policy engagements with the district and state level political and bureaucratic institutions for corrective measures as well as making new demands that are needed for the communities and local stake holders. Public policy approaches to development are generally limited to levels of India and States. Given the vast geographic expanse and high population concentrations across India a meaningful development strategy that address acute poverty, malnutrition, illiteracy, ill-health must occur at the level of the districts. Further, hitherto development policy decisions were made using a combination of district level per-capita averages and a small set of indicators such as average rainfall and agricultural productivity; little information on the quality of life and human development were available.

In the recent past, however, dependable data on a number of qualitative aspects of human lives have become available at the level of the district. Such data can be extracted from the decadal Census (most recent 2011), the annual national sample surveys (large sample size surveys are done at about five years interval) and district level household surveys. The 'US-India Policy Institute', Washington D. C and 'Centre for Research and Debates in Development Policy', New Delhi have extracted a number of socio-economic and human development indicators from such multiple, nationally representative sample surveys, for all districts of India. They are reviewed to assess

and compute the 'levels of development' and 'equity of accesses to development for each district. The composite index consists of four dimensions - economic, enabling material-wellbeing assets, education and health. The results are available in the form of annotated maps, graphs and figures for easy comprehension and use. The (District Development and) Diversity Index provides a perspective that emerging India must work with to change the mind-set of the bureaucracy.

Continuing this district level analysis, in the second-stage the development indices are computed to each of the major socio-religious communities (SRCs) for each district of the state and all districts of India. The differentials according to SRCs are presented in graphic format. This analysis is resonant of the Sachar Committee Report which was completed in 2006; current analysis can be termed as mini-Sachar report for each district of India. In this context there is scope to elaborate analysis of data on employment, financial allocations and measurable outcomes disaggregated by SRCs so as to operationalise policies for improving diversity in public programs. The district level mapping and analysis for operationalising diversity in public and private space cannot be over emphasised.

Generally the district-level reviews use service statistics drawn from district records which are often not up-to-date and of qualitatively poor. The strength of the current research lies in the type and source of data as well as methodologies used in analysis. Information are extracted from unit (household) level records from well respected

surveys, therefore estimates are robust and academically sound. These estimates provide the academics, watchful communities, civil society and people at large opportunities to find out the pathways to engage the district level bureaucrats and governance.

The most important issues confronting the communities at the district level are two: a) to begin with financial allocations are inadequate; yet huge proportions of the development funds earmarked for annual expenditures on essential programs such as mass primary/elementary education, women and child development services, public healthcare and employment guarantee scheme are never appropriated and spent. b) The inequity at the level of the district is a serious issue; there are many versions to it such as based on occupations, education levels and also social identities expressed in terms of religious and caste affiliation. The last dimension which important at local level in distribution of welfare benefits; they have become contentious at national-political level leading to promotion of discrimination at the grassroots.

The following is a short list of selected districts at about one hundredth interval. North Delhi is ranked 1 with an index of 0.70. Ideally first rank holder could have taken a value of 1.00 but even the first district has huge scope to develop for example in health parameters which has only a value of 0.53 although the enabling index is 0.90.

Rank Dist State	Economic	Education	Enabling	Health	Devpt. Index
1 - (DL)-Delhi North	0.68	0.67	0.90	0.53	0.70
100 - (TN)-Erode	0.43	0.44	0.60	0.47	0.49
201 - (UP)-Lucknow	0.35	0.44	0.54	0.39	0.43
277 - (UP)-Varanasi	0.35	0.41	0.46	0.34	0.39
304 - (UP)-Agra	0.33	0.41	0.52	0.25	0.38
400 - (MP)-West Nimar	0.26	0.37	0.45	0.25	0.33
500 - (MP)-Barwani	0.24	0.31	0.42	0.15	0.28
599 - (BI)-Sheohar	0.11	0.28	0.05	0.12	0.14

However, the contrast is comparing the first ranker and the last. Sheohar in Bihar has recorded a development index of only 0.14 compare this with North Delhi which has a value of 0.70. Note that Sheohar has no enabling economic environment which can push development any

time near future unless critical policy strategy and investments are made soon. It is this kind of analysis both within the state and across the state which gives comprehensive information for upliftment of communities living in clearly identified districts of India.

It is in this context that the district level development and development index provide 'essential empirical evidence that makes a case for setting up of National and State-level Equal Opportunity Commissions (EOCs)'. The state level aggregated district-reports will help the state government in many respects. Besides enabling assessing and monitoring the levels of development and equity, the indices will make it easy for the state government to articulate the need to establish 'State Level Equal Opportunity Commission'. Such EOCs can independently deal with differentiation in access to public services at the grassroots level, thereby enabling the elected government and associated institutions to focus their time and energy to the development of the state. The EOC as an independent institution will facilitate communities and local stakeholders - civil society and private investors, to interact with each other as well as with the government bureaucracy to thrash out contentious issues and strengthen welfare policies. Further establishing State-EOCs will serve as examples for setting up a national EOC as well.

To articulate these relationships better it is essential that development practitioners, government officials, political

leaders and civil society groups come together to discuss and debate strategies to address district level development and diversity of development. Such data will also give a comprehensive visual picture of the development of the nation in a comparative perspective promoting strong sense of

nationalism and patriotism. DDDIx makes a good case for district level monitoring of development strategy considering the aspects of equity and social justice.

Is DDDIx a mini-Sachar report at district level?

Not exactly, it is much more than the Sachar report. Sachar generated most of its estimates and analysis at the level of the state and presented them in a comparative perspective according to socio-religious communities (SRCs). For the first time it came out with a surprise finding, that the Muslim community had fallen to the bottom of the economic and social pyramid, and in most of the states even below the conditions of the SCs and STs.

DDDIx is a more technically advanced tool in assessment of grassroots level ground realities of development, through creating indices for easy comparison at a more granular District level. The analysis further proceeds to add the dimension of diversity to district development estimates and compares as to how each socio-religious community is placed in a relative context. Such social comparisons of development are the first of its kind at the level of the district.

Sachar report suggested that the government itself should take the responsibility of generating and estimating the 'diversity index' as a tool for assessing its performance in most of public programs and in public spaces. While the governments either at the national or the state levels are not motivated enough to undertake the diversity index estimations; it became necessary therefore that the private citizens and individual experts fill this gap. Thus DDDIx is a pioneering effort of the CRDDP and USIPI that will carry forward the philosophical directions and inclusive development goals of the Sachar report to a whole new level.

It's important also to understand the context of Sachar committee report, (2006) which was followed by the Diversity Index report (Kundu, 2008), Equal Opportunity Commission report (Madhav Menon, 2008) and more recent post-Sachar evaluation committee report (Kundu, 2014). To a layman all seem the same but they are logical continuation of the Sachar committee work. However, since the lack of government attention to undertake the actual estimation of the diversity indices, the private pol-

icy think tanks such as the CRDDP and the USIPI embarked upon the computations of such indices at the level of the districts across India.

Sachar Report (2006): Sachar provided statistics on education, income, work participation, health and access to infrastructure at national and state level. And provided data to compare different social and religious communities on the above, proved Muslims were at the bottom of society. It also identified least developed and Minority concentrated districts for the government to focus their efforts. Plus, it gave few dozen policy recommendations so that the governments both at the national and state level act. The national governments have been consistently claiming (both under UPA and now the NDA) that it has accepted and implemented all but one recommendation. Meaning the national government through the ministry of minority affairs also claiming that it has done everything it was expected to do and nothing new is expected of them. But the harsh reality is that eight years have passed and none have a clue how things have changed for better on the ground.

Kundu Committee (2014): The CRDDP/USIPI and the civil society were constantly raising voice that creating a minority ministry, announcing few programs and allocating some money, marginal and inadequate allocations (Abusaleh Shariff, 2015 forthcoming) and also (Amitabh Kundu, 2014) are not enough. The citizens of India however, expect that the government ensure that the programs are effective and indeed impact and change the lives of people for better which can be seen, felt and measured from the grassroots. And indications from the ground are that things have barely changed or are changing too slowly. Upon USIPI's insistence (USIPI's Publication "Six years after Sachar" (2011) which was a precursor) the Government reluctantly created the Kundu committee to study the impact of post-Sachar policies of the govt. and document which programs are working and which ones are not and make recommendations for improvement. Kundu committee report was accepted by the new NDA government, many ministers and even the Prime Minister has made references to it. One has to wait and watch and be vigilant to find as to what new actions the government and the parliamentary system will take.

District Development and Diversity Index: There can be many different ways to compute the diversity index in

India, some of the major directions to this can be found in the diversity index (Kundu) committee report (2008). However, the estimations of the major human development dimensions through the 'DDDIx' is a game changer. DDDIx is anchored on 17 of the 27 development and livelihood measuring variables extracted from well respected government supported national sample surveys. DDDIx provides an index or rating for four dimensions and one composite index for every district in India. The analysis ranks top and bottom districts, top most district Delhi has an index of 0.6; meaning there's room for improvement even in India's top district. Bottom most district Araria in Bihar has an index of 0.19, bottom of the pile. Each of the individual variables provide a wealth of information and provide insights to governments, businesses, civil society, activists, grant making bodies, UN, World Bank etc. These indices will also have another dimension of "diversity" to compare between socio religious communities. It is expected that such estimates are updated and improved over years so as to hold the Government's feet to fire, just as the CEO of a company would dread a poor S&P rating.

DDDIx Facilitated Pathways Linking Communities with Governance:

1. District as unit of analysis will enable comparing development within states and across states. Comparisons are feasible taking into account the impact of factors such as neighbourhood effects, agriculture intensity, urbanization and proportion of population by Socio-religious Communities.
2. Comparisons feasible taken into account the best-practices identified at district level across states as well as across India.
3. The District Development structured broadly into human development dimensions as by the United Nations and within the frame of millennium development goals. The district development index estimates are best alternative to current method of identifying the poor which is anchored mostly with the consumer expenditure.
4. Feasible, for the first time, to review and comprehend a relative view of the four components of development index at the district level. The components identified measure the economic, material wellbeing, educational and health dimensions of human life.
5. District Development Index facilitates the policy engagement with the district bureaucracy that yield better results; due to precision in identifying need-based community demands and discourses around achieving them.
6. Feasibility to link the district development-deficit according to components of index and the budgetary provisions with relevant departments or programs at the district and tracing them with the state level budgetary allocations.
7. The DDDIx approach and methodology facilitates enhancing the utilization and efficiency of the allocated funds without seeking additional funds immediately.
8. The efficiency of budgetary utilization happens through (a) increased efficiency of annual allocations, and (b) efficiency gains achieved in budgetary amounts spent during the year due to increased transparency, need-based implementation of programs to the satisfaction of the stake-holders.
9. Quarterly or half yearly monitoring of specified programs and projects becomes feasible both within bureaucratic structure as well as in the frame of civil society and stake holder analysis.
10. Enable creating a district level 'management information and evaluation system (MIES) for each of the components of the development index becomes a reality.
11. Real time Centralized monitoring by the state level authorities becomes easy and cost efficient and reduce the multiple steps of monitoring thus reducing data and analytical errors and increase accuracy of information and monitoring.
12. The national level coordination of the state and district level monitoring and evaluation becomes timely, efficient, easy and cheap.
13. The district development index and the follow up action plan can directly feed discussions at newly created National Institution for Transforming India or 'NITI Aayog' as well as the concerned federal ministries.
14. The procedures when standardized across India will become easy to be used by international agencies such as United Nations, the World Bank, the Asian Development Bank and the New Development Bank.

Action Plan

This purpose of undertaking the DDDIx - large empirical study, was to estimate and compute indices which can be subsequently used for day-to-day policy formulations and mid-way course corrections of programs at the districts and possibly at block levels. Therefore, there is a need to prepare an 'Action Plan' to take the usefulness of the DDDIx to the State governments and District level bureaucracy. This can best be done through the involvement of the academics, civil society networks and community groups.

In the following are narrative steps and methods to identify priority districts spread across India and enlist local civil society organizations that will set actionable ideas for each district.

1. Arrange all the 599 districts in the order of percentage of deprived communities – the SCs/STs and Muslims.
2. Identify the level of district development index for say top 50 or 100 districts based on percentages of deprived communities and select critical districts for actionable program. These districts will contain large SCs/STs and Muslim populations.
3. Identify the two components in each of the district which is least developed. The components are a) economic, b) material wellbeing, c) education and d) health.
4. Study the geographic distribution of the short listed (can select 10 districts for focused prototype development during the first years of work) districts from the above about 50-100 districts.
5. Identify programs which can be charted out to facilitate development of each district.
6. Identify the funds availability from the districts and state budgetary documents. This work has to be undertaken by an expert in each of states selected for focused attention.
7. Identify available civil society in each district.
8. Prepare necessary proforma / stationary which collects information from the civil society.
9. Engage these civil society through the web based registration process.

10. Help create civil society network in identified districts where there are none or limited number of civil society institutions.

11. Prepare a system of 'due process' to authenticate selected civil society institutions and identify local level supervisory mechanism through community leaders.

12. Assign tasks to this civil society in terms of a) procedures to engage the bureaucracy and b) procedures to engage the communities in specified district.

13. Identify the linkages of the MCD program of the Ministry of Minority Affairs and major programs from the ministries of social welfare and development of the SCs/STs.

14. Link the district development with the annual financial allocations

15. Chart out a program of monitoring and evaluation of all the above tasks

16. All these activities can be undertaken through a process of net-based engagement that can be exclusively developed. These activities can be managed by a centralized institution with experts in 'Net based outreach and networking'. The local activities that can be itemized have to be performed by the local civil society with no or limited financial inputs from outside. However, it would be feasible to access resources from the District level program implementative agencies.

Methodology:

Choice of indicators:

The Human Development Reports (HDRs), published annually by United Nations Development Programme (UNDP) since 1990, have brought into focus that the objective of development is not simply to produce more goods and services for material enrichment, but to increase the capabilities of people to lead full, productive and satisfying lives. What is of basic concern is the ability of people to lead a long and healthy life, to have access to knowledge and skills, and sufficient income to buy adequate amounts of food, clothing, shelter and other basic amenities.

Keeping in view the objectives of development across countries, the HDRs identified three areas of social con-

cern, viz., education, health and material wellbeing. For each of these areas, the reports have also identified a suitable indicator to measure progress; life expectancy at birth for health, adult literacy rate for education and per capita income with declining marginal utility for material wellbeing. The relative performance of a country in an area of concern is measured with reference to the 'maximum' and 'minimum' values of the concerned indicator. Division of the value of the country by the range viz., the difference between the maximum and the minimum is expected to make it "scale free". The scale free values of the three indexes are then combined, giving equal weightage to each, to get the Human Development Index (HDI).

Construction of district level 'human development indices':

An overview of development literature makes it evident that development cannot be measured through income alone. It manifests in a number of dimensions such as in human health, longevity, literacy and a certain level of standard of life that must be incorporated in any measurement exercise. The indicators selected for these dimensions, therefore, must articulate aspects of development that is conventionally missed out. However, there will be difficulties in determining the number of indicators that would adequately capture the shades of meaning associated with development. Indeed, for making the index useful and acceptable in policy making, it would be desirable to include only those indicators that are amenable to measurement and statistical analysis. The UNDP has spearheaded the initiative to compute the Human Development Index (HDI) which encompasses besides physical income two other aspects that reflect health and educational development, viz. life expectancy at birth and adult literacy. UNDP measures had to be based on simple measures since it had to be used for international comparisons. In case of country specific and disaggregated at districts, it would be possible to prepare a unique list from the most dependable sources. In this study care is taken to include a larger set of unique various comprehensively highlighting four dimensions viz. economic, material wellbeing, education and health unlike the three dimensions of HDI constructed by UNDP.

Effective targeting of development programmes initiated by the government often requires knowledge regarding the

positioning of the states in terms of human development. But, because of large geographical spread and huge population of Indian states, it becomes essential to look at the relative positioning of the districts while considering the human development. An attempt is made here to compute human development index (HDI) in the districts in India across various socio religious communities. This index is referred to as 'District Development and Diversity Index' DDDIx. The composite DDDIx would enable determining the levels of development of the districts and rank them in an ordinal scale in order to formulate more focussed development strategies.

Data Sources:

One crucial question that arises in this context is whether the social data base in the country is adequate for the preparation of Human Development Profile at the district level, similar to what is done in the UNDP reports? Relevant data are available from sources like the Census, NSSO, SRS, NCERT, DLHS and NFHS. These offer fairly dependable information that could be used to prepare Human Development Index that can address a broad range of national concerns. However, there are some limitations of the existing data sources. One, all sources do not have uniform concept coverage or a framework. Second, the indicators on which different sources collect information are different. Third, the time period and the periodicity of data collection are different for different sources.

Unique Focus:

A unique feature of current study is to focus on social inequalities extant in the country and the major objective is to capture the progress in human development across various socio religious communities¹ at the district level in India. In this regard, an attempt is made here to discuss how inclusive has been India's development process. In order to do this, four indices are constructed — the Health

¹ Both the NSSO and DLHS selected very small number of households of Jains, Parsis and Buddhists. No meaningful result of these communities by state can be extracted from a very small sample and it is not advisable also. District-wise number is too small to analyse the data for the same. Hence, the study restricted analysis of Hindu SC/ST, Hindu OBC, Hindu General, and Muslim. Christians, Sikhs, Jains, Parsis and Buddhists has been merged and categorized as "Other minorities".

Index, the Education Index, the Economic Index and the Material Wellbeing Index. For computing the DDDIx of Indian districts across different socio religious communities (SRCs) in the present study, multiple indicators in four broad areas of social concern viz. economic development, material wellbeing, health and education have been chosen. The data related to economic development, material wellbeing and education of different socio religious groups has been taken from the latest (68th round of) National Sample Survey Organisation (NSSO) conducted during 2011-12. The sampling design defined rural and urban parts of districts as strata for selection of sample villages and urban blocks respectively from the 61st round survey of NSS onwards. This has paved the way for generating unbiased estimates of important socio-economic parameters at the district-level adequately supported by the sample design (Siladitya Chaudhuri, Nivedita Gupta)².

The data related to health have been extracted from DLHS-3 survey conducted during 2007-08 which is the latest available data in this regard. The analysis based on the correlations among different indicators suggests that these two types of data sets have a high degree of consistency and would be useful in determining the rank order of the districts. The two surveys have collected information on 599 common districts only; instead of all the 640 districts. Hence, the DDDIx has been constructed for 599 districts of India.

Selection of Indicators for Construction of District Development Index:

Four areas of development have been considered in the present study. They are economic, material wellbeing, education and health. Keeping in mind to construct indexing of different socio religious communities across districts in India and based on the availability of indicators, the best possible indicators explaining the development parameters on different areas have been considered for the present analysis.

Indicators chosen for this analysis for different areas of development are given below.

² Economic & Political Weekly, February 28, 2009 vol XLIV No 9. The authors are working in the National Sample Survey Organisation.

Economic Development Index:

1. Monthly Per Capita Expenditure (MPCE) in Rupees (output)
2. Percent people above poverty line (output)
3. Per cent households having regular salary earner members (output)

Material Wellbeing Index:

1. Average of asset index³ score at HH level (output)
2. Percentage of HHs using LPG as primary source of cooking (output)
3. Percentage of HHs using electricity as primary source of lighting (output)

Educational Development:

1. Percentage of female literates (7+ years) (output)
2. Percentage of adult literates (18+ years) (output)
3. Percentage Matric pass (15+ population) (output)
4. Annual average household expenditure on education (input)

Health Index:

1. Percent currently married women who were more than 18 years old at the time of marriage (output)
2. Percent currently married women who received post natal care within 48 hours of delivery (output)
3. Percent fully immunized last and last but one surviving children (age 12-23 months) (output)
4. Percent currently married women using any contraception method (output)
5. Percent currently married women who are aware of HIV/ AIDS (output)

The sub-indices of these four areas of development have been computed separately for each SRC. The overall index, DDDIx, has been obtained by averaging the

³ Composite asset index has been constructed out of data on ownership of TV(1), AC/cooler(2), Washing machine(1), Refrigerator(1), Two wheeler(2), Car/jeep(2) and PC/laptop(2). Numbers in () indicate the weights assigned to the HHs owning the respective item. For example, if a HH owns all the above listed items except two wheeler and car/jeep, its asset index score will be $(1+2+1+1+0+0+2)/(1+2+1+1+2+2+2)=7/11=0.64$

sub-indices of economic, material wellbeing, education and health.

$$\text{Index Value} = \frac{(\text{Actual} - \text{Minimum})}{(\text{Maximum} - \text{Minimum})} * 100$$

Estimating Procedures:

The relative performance of a district in an area of concern is measured with reference to the ‘maximum’ and ‘minimum’ values of the selected indicator. Division of the value of the district by the range viz. the difference between the maximum and the minimum make it “scale free”. The scale free values of all the indexes are then combined, giving equal weightage to each, to get the Development Index (HDI) for the district.

All the districts are divided into 5 groups according to their development levels. The method to define the cut-offs for these development levels are based on the median value and standard deviations calculated for each sub-index (i.e. Economic, Education, Material Wellbeing and Health) and the overall Development Index. The levels of development created with cut-offs based on median and standard deviation values are as follows:

Development Category of the District	Index Score Range
Most Developed	More than or equal to ‘Median+1SD’
Developed	More than or equal to ‘Median + 0.25SD’ & Less than ‘Median + 1SD’
Less Developed	More than or equal to ‘Median - 0.25SD’ & Less than ‘Median + 0.25SD’
Under Developed	More than or equal to ‘Median - 1SD’ & Less than ‘Median - 0.25SD’
Least Developed	Less than ‘Median - 1SD’

DISTRICT DIVERSITY INDEX STATE OF BIHAR

HIGH DISPARITIES

Karnataka has always been in top 5 states high growth state of India – often placed higher than Gujarat in many parameters including FDI

Job Less - Structure of Income – Need to Set it Right

SECTORAL SHARES			
	SERVICES	MANUFACTURING	AGRICULTURE
GDP	56%	28%	15%
LABOR FORCE	18%	25%	56%

Puzzling: High geographic disparity
High disparity between communities

- Conditions of minorities needs improvement
- Conditions of Muslims close to Dalits, but better
- Conditions of minorities relatively worse off compared with other Hindu communities

MINORITY SCHOLARSHIP PROGRAM 'ENHANCED, IT ENABLED AND TRANSPARENT'

- Karnataka implements minority scholarships on GOI guidelines - Rs. 43.4 cr (404,511 students) in 2013-14
- GoK has extended these scholarships to a total of 756,075 students by allocating Rs.64.2 cr and covering an additional 351,564 students
- Pre-matric scholarship demand is for about 16 lakh students on roll in classes 1 to 10
- Scope to expand the scheme to cover at least a total of about 13 lakhs or 80 % by the year 2018-19
- Post-matric scholarships of upto Rs. 5000/- . But the procedures and inter-district and inter-school differentials needs to be reduced
- Means cum merit scholarships are in demand need to be enhanced
- Scholarships for International Education:
GoK programme distributed Rs.3cr during 2013-14
60 students at the rate of Rs.5 lakh per year for period of two years
- Scholarships available to minority students irrespective of where they study – Government managed, Private managed or Minority managed schools and collages

EXPAND AND DEEPEN THE SCHOLARSHIP PROGRAM

- The Scholarship Program 'now fully centrally sponsored' as opposed to 75:25 earlier
- The State's share now can be used to enhance the pre-matric 'State sponsored scholarships'

GOK INITIATIVE REQUIRED: REVIEW MINORITY ACCESS TO 'FLAGSHIP PROGRAMS'

- Sarva Shiksha Abhiyan
- Programs relating to Agriculture, Land development etc
- Programs relating to Employment in Government Services
- Issuance of OBC certificates for the purpose of employment and education
- Universal ID – ADHAR coverage
- Bank Accounts
- Integrated Child Development Services
- National Rural Employment Guarantee Scheme

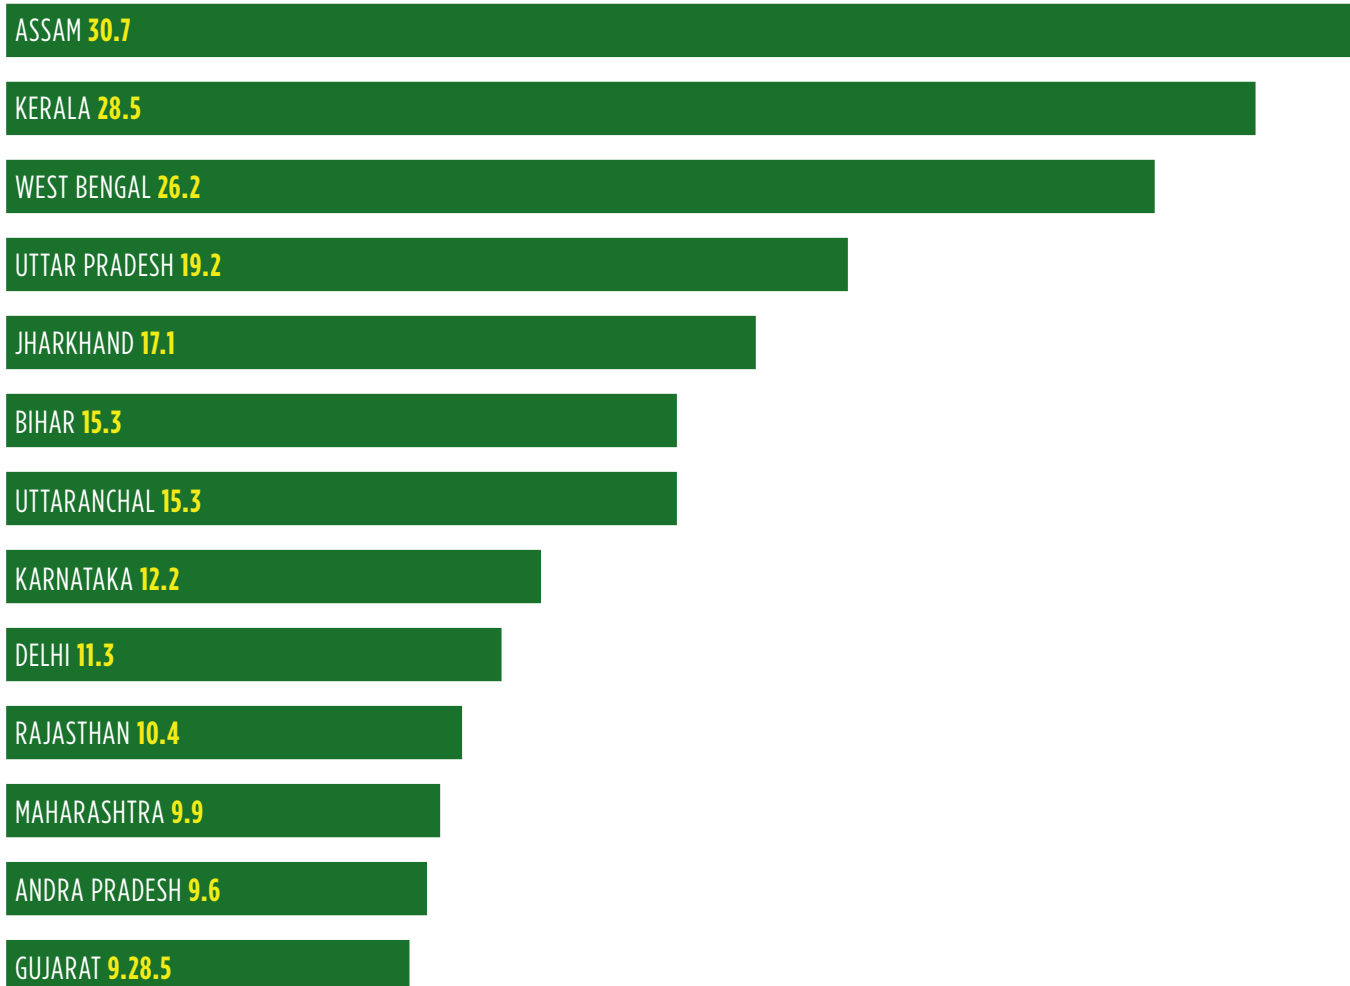

GOK IS CONDUCTING ITS OWN CASTE CENSUS

- This is one of the most important pro-poor policy of GOK
- Caste census and data to be used in Socio Religious Community Format as suggested by Sachar Committee Report of the Government of India
- Recommend the GOK criteria of OBC identification of the Minorities to Government of India so that Muslims and other minorities get Central Government jobs in the OBC quota
- GOK to prevail upon Ministry of social justice GOI

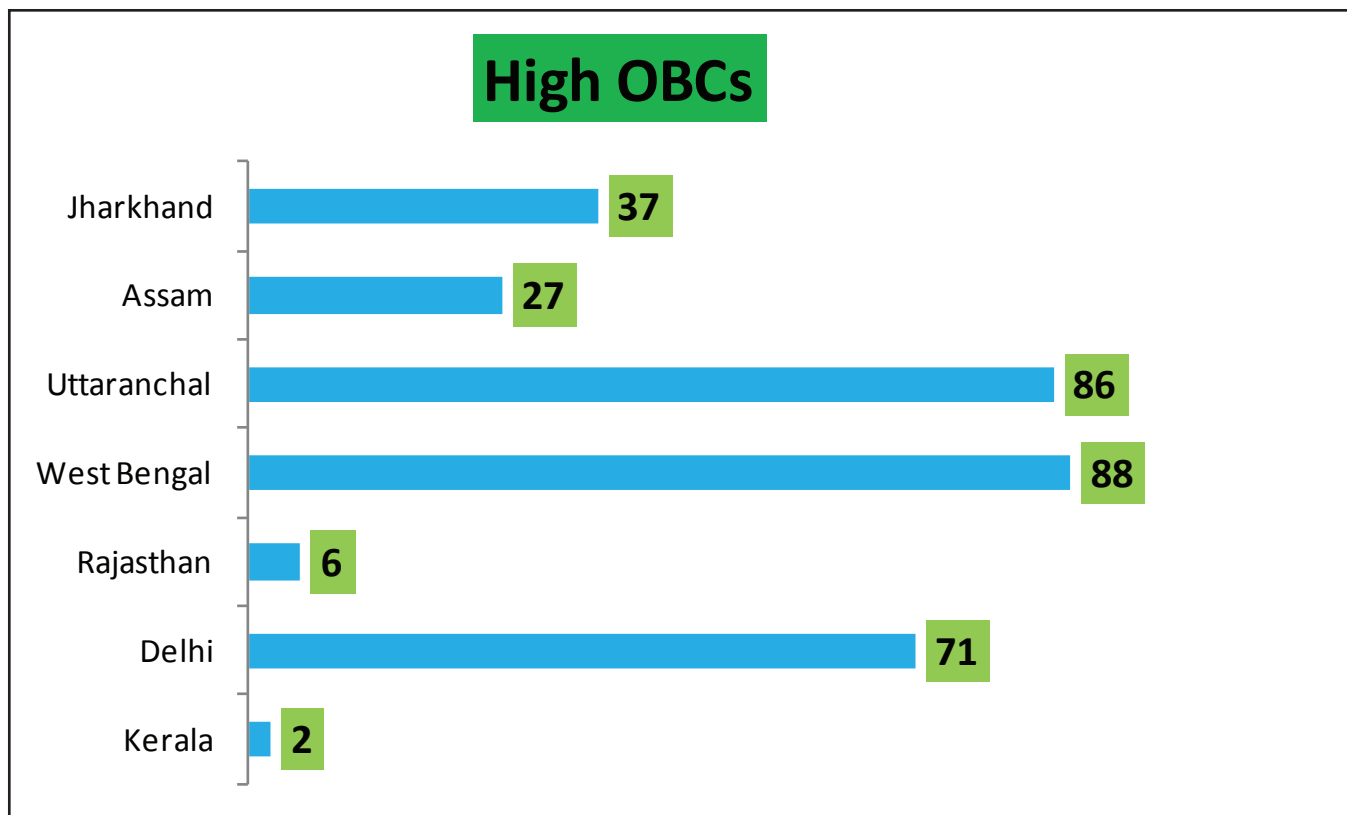

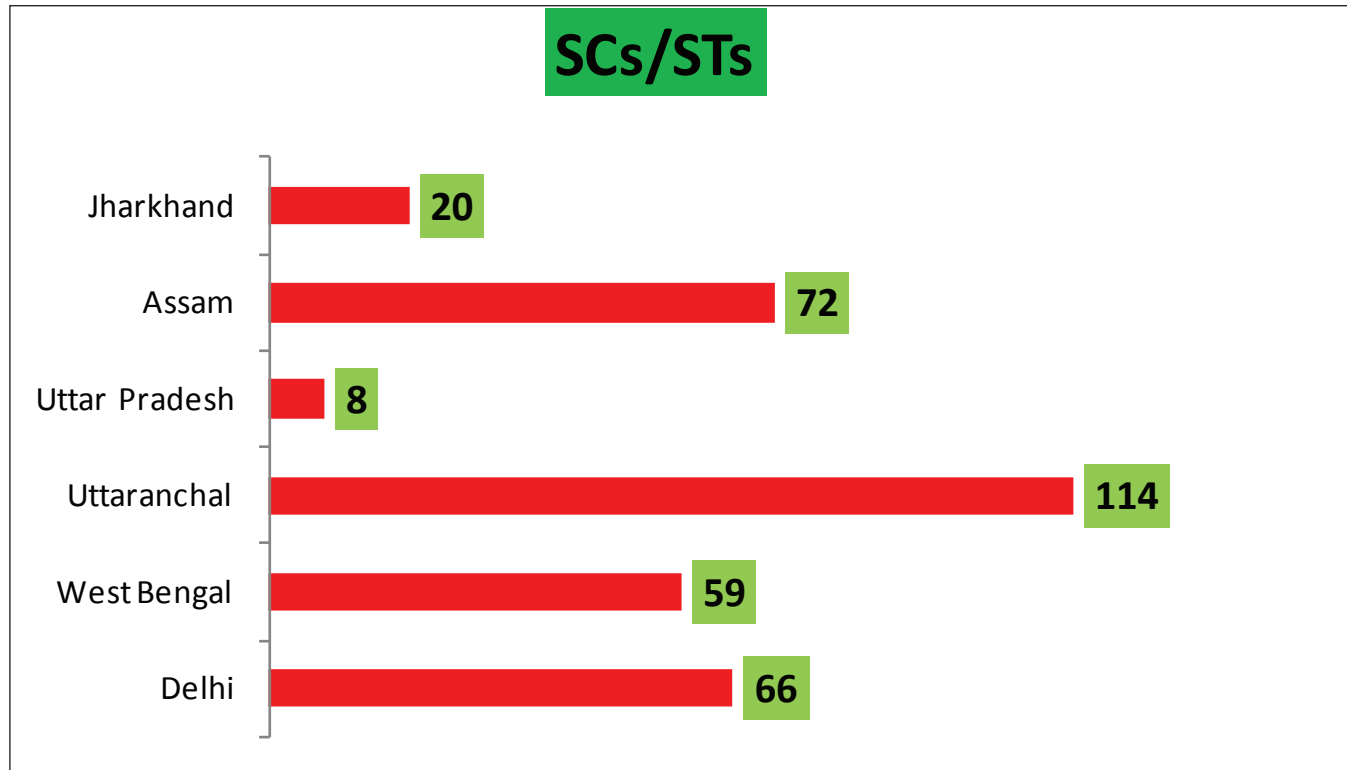

PROTECT AND DEVELOP WAKFS PROPERTIES

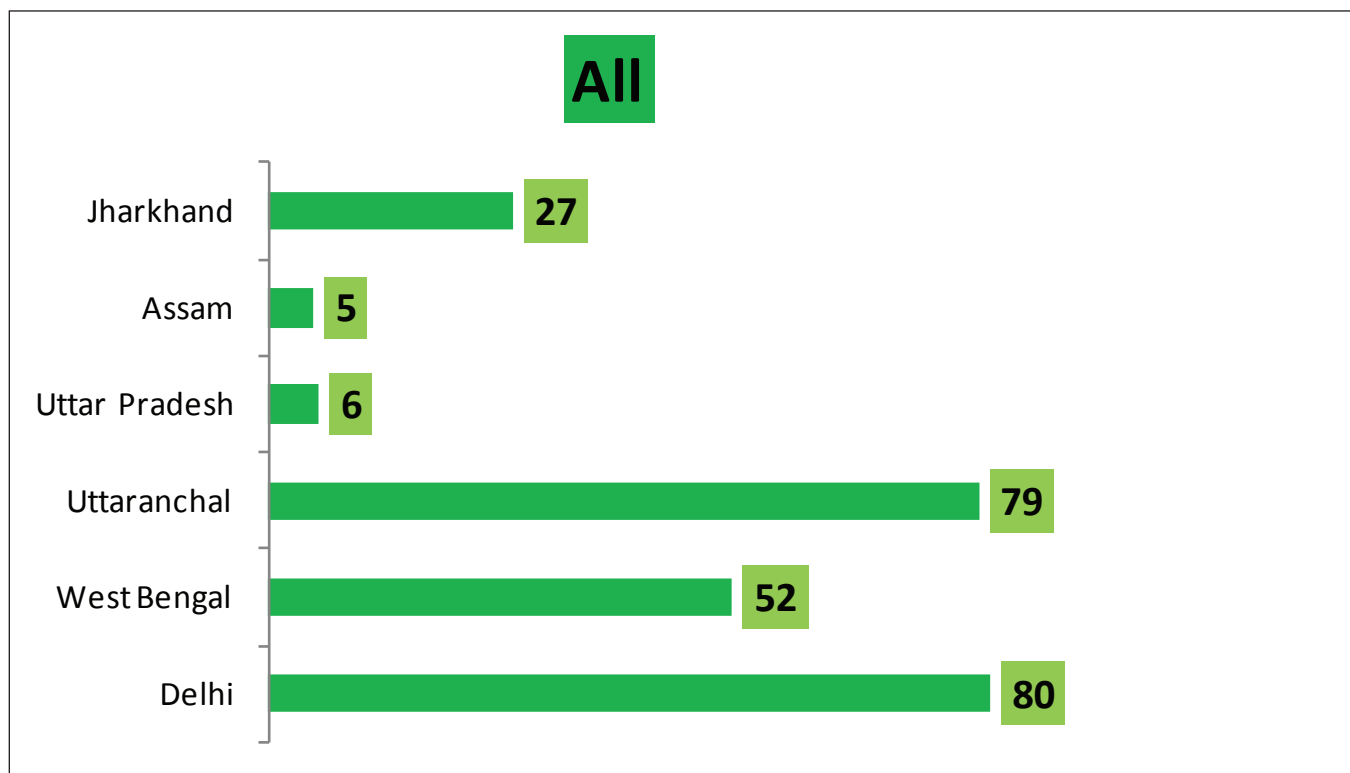

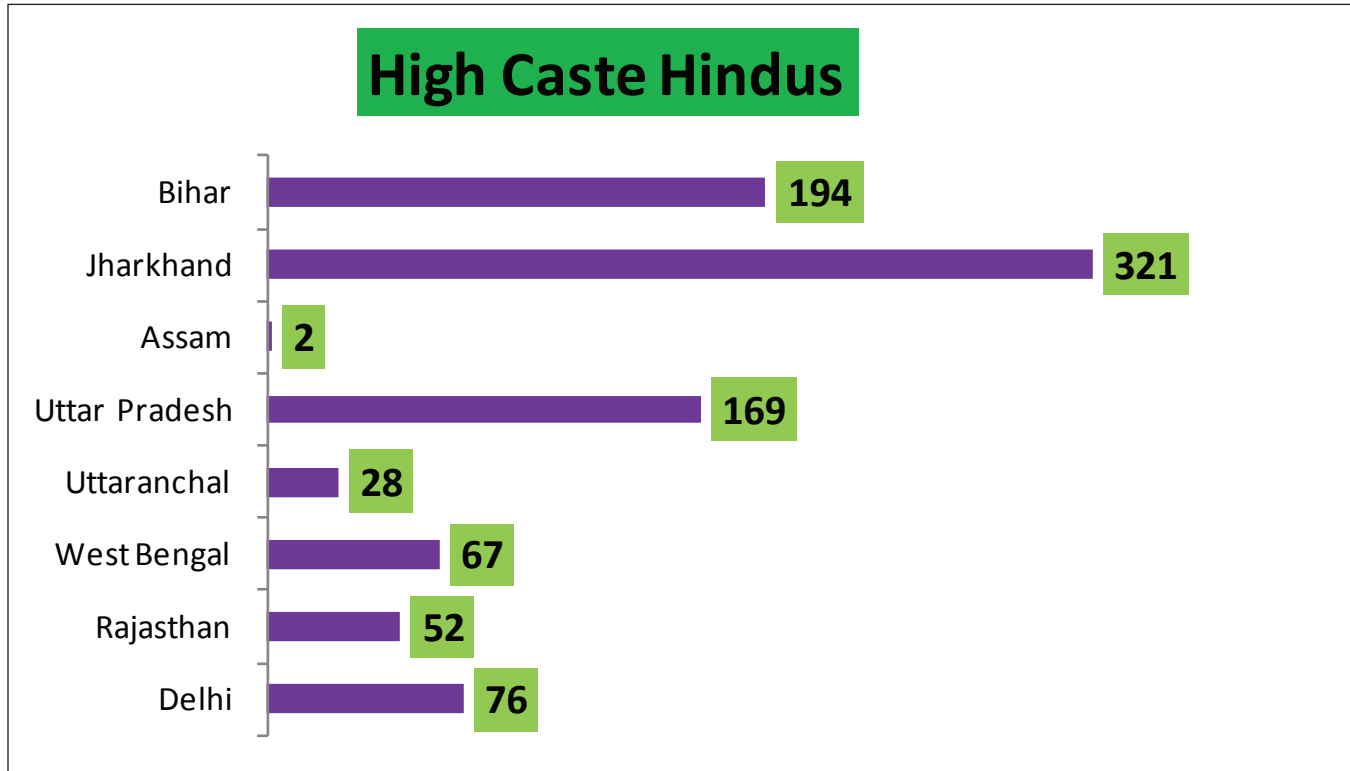

- Independent auditors – (not the local audit)
- Market based investment and development of property
- The moneys thus generated to be ploughed back to address the poverty issues of the community members
- Nominate women and women's group in management of wakfs

MUSLIMS AS %GE OF STATE POPULATION

STATES | MUSLIMS - EDUCATION HDI DEFICIT THAN OTHER SRCs

NOMINATION FOR PANCHAYATI RAJ INSTITUTIONS

GOK can follow the example of the Andhra Pradesh
which introduced a nomination procedure to include
minority representation in

The Panchayats (Mandal and Zila)

The Municipalities

And

The Cooperatives

During 2005 and 2006

ESTABLISH EQUAL OPPORTUNITY COMMISSION

The state level aggregated district-reports facilitate state government:

- Enable assessing/monitoring the levels of development and equity
- Facilitate the State to articulate the need to establish 'State Level
Equal Opportunity Commission'
- The EOCs independently deal with differentiation in access to public
services at the grassroots level
- Enable the elected government to focus on development of the state
- EOC -independent institution facilitate communities and local stakeholders
- civil society and private investors, to interact with each other as well as with
the government bureaucracy to thrash out contentious issues and strengthen
welfare policies
- State-EOCs an example for setting up a National
